

World's Strongest Poly Spill Pallet

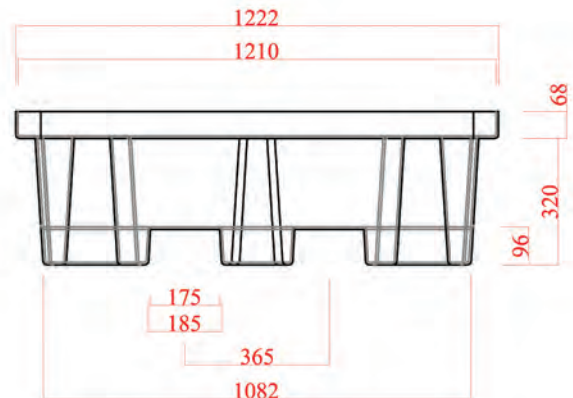

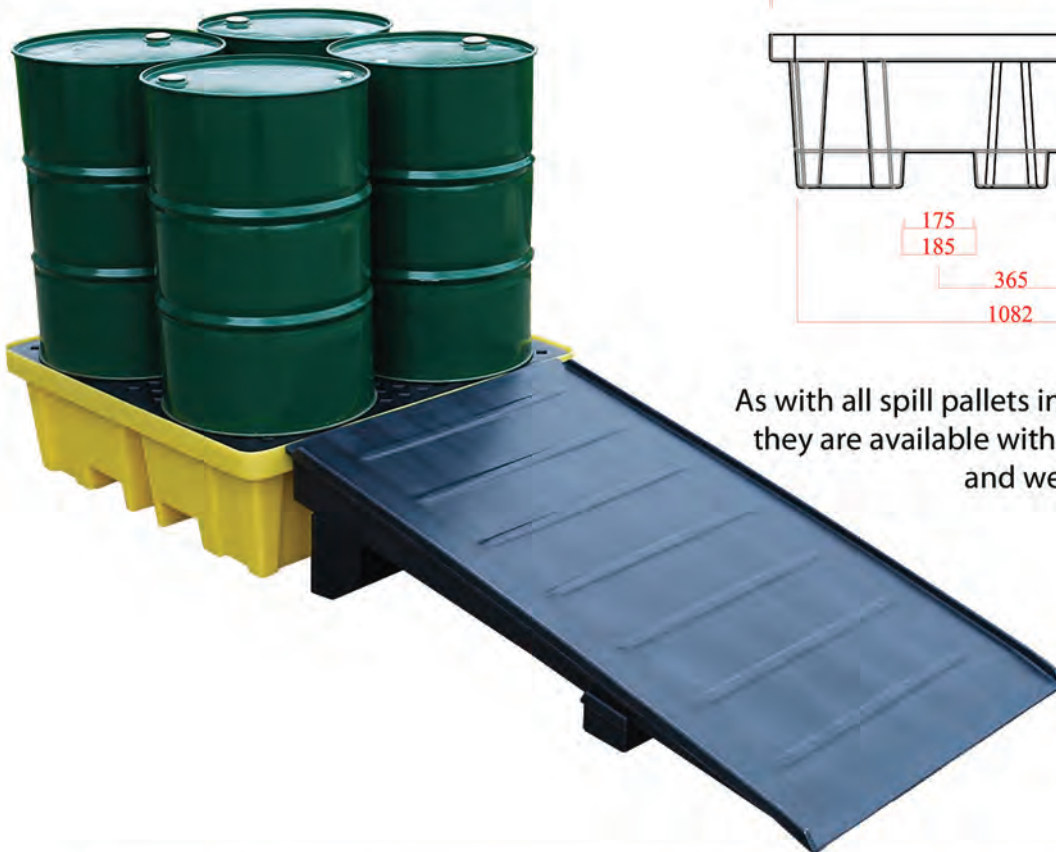

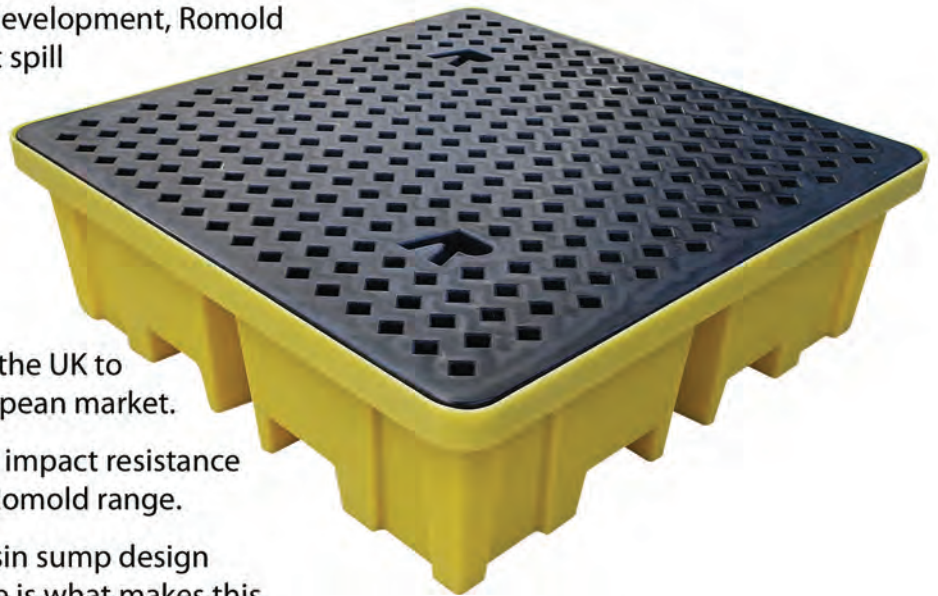

After three years of modelling and development, Romold has now made the world's strongest spill containment pallet with a UDL capacity of 3,000kg (6,612 lbs).

This new model also features a 4-way forklift access and a new rotomoulded grate.

As with all of the Romold range of products, they are manufactured in the UK to meet the strict demands of the European market.

It still has the superior chemical and impact resistance you have come to expect from the Romold range.

This new generation 100% virgin resin sump design combined with the heavy-duty grate is what makes this spill pallet a true world champ.

As with all spill pallets in the Romold range, they are available with ramps, sump plugs and weather-proof covers.

Code	Description	Size (mm)	Sump	Weight	Load
TSSBP4FW	4-Way 4-Drum Spill Pallet	1220 x 1220	250L	40kg	3000kg
